

## Cat Fence

### The Cat Fence that works

*Ray Statz, founder of Qual Line Fence Corporation, once said that you could never fence a cat. Now, 40 years later, he has proven himself wrong.*

Qual Line's unique Cat Fence is attractive, sturdy, easy to install, and – best of all – it works! The fence material is heavy 3/16" (6-gauge) welded steel wire with 2" x 4" spacing. The panels are stiffened by horizontal ridges as well as by the safe and attractive rolled top edge. The angled valance along the top deters most cats. If your cat is a super athlete, an optional nylon curtain can be attached.

Our Cat Fence is available in black or silver, and can be installed as a stand-alone fence or attached to an existing fence. Some advantages of our Cat Fence include:

- ◆ All-weather durability – stands up to snow and ice.
- ◆ Strength and longevity – by bending and rolling the heavy-duty materials we create a fence with long-term structural soundness.
- ◆ Good security – 2" x 4" openings are too small for intruders to get a toe-hold. And the 3/16" heavy wire is very difficult to cut.
- ◆ Lasting good looks – won't sag or buckle over time. If hit by a plow or mower, it won't bulge like a chainlink fence.
- ◆ Unobtrusive – almost transparent when seen straight on, this fence causes minimal disruption to the existing view and landscape features.
