DiamondBack™ and RollTop™ Fence

DiamondBack and RollTop fence – strong, secure, unobtrusive

Our unique DiamondBack and RollTop fence panels are manufactured by our craftsmen from heavy 3/16 inch (6-gauge) welded steel wire with 2 inch x 4 inch spacing. The panels are further stiffened by horizontal ridges. RollTop panels are finished with a decorative rolled top edge for further stiffness, good looks and safety.

Advantages include:

- ◆ Strength and longevity – heavy construction and design stiffness contribute to long-term structural soundness.
- ◆ Good security – 2 inch x 4 inch openings are too small for intruders to get a toe-hold. And the 3/16 inch heavy wire is very difficult to cut.
- ◆ Lasting good looks – won't sag or buckle over time. If hit by a plow or mower, it won't bulge like a chainlink fence.
- ◆ Unobtrusive – almost transparent when seen straight on, this fence causes minimal disruption to the existing view and landscape features.

DiamondBack panels are available as 68, 56 or 44 inch heights. RollTop panels are 54 inches or 42 inches high. Panels can either be galvanized or black powder-coated (custom colors are also an option). Fences are constructed using 1-5/8 inch Schedule 40 posts set 5 to 10 feet apart. Heavy 2-1/2 inch Schedule 40 gate posts incorporate our steel Drive Anchors for lasting strength.
